SUMMARY

I'm a Senior Software Engineer with a strong background in frontend development, platform modernization and large-scale web applications. Throughout my career, I've worked across backend, full stack and frontend roles, helping teams evolve legacy systems, build scalable solutions and improve developer experience.

TECHNICAL SKILLS

Frontend

React, TypeScript, JavaScript, HTML, CSS

State Management & Data Fetching

TanStack Query, Redux, Redux Toolkit, REST APIs, Axios

Mapping & Visualization

OpenLayers, Three.js

Testing

Vitest, Jest, React Testing Library

UI & Design Systems

Web Components, Storybook, Styled Components, Material UI, Bootstrap, SASS

Build Tools & Tooling

Vite, Webpack, ESLint, npm, pnpm, Yarn, Git

AI-Assisted Development

ChatGPT, Claude, LLM-based coding assistants

Collaboration & Delivery

Scrum, Kanban, Jira, Figma, Bitbucket

LANGUAGES

Portuguese — Native

English — Professional Proficiency

Dutch — Currently Learning

WORK EXPERIENCE

Senior Software Engineer | Feb. 2023 - present | Cyclomedia B.V.

Worked across both Cyclomedia's legacy and next-generation geospatial platforms, contributing to feature development, maintenance, modernization and architecture initiatives. Helped analyze and redesign complex legacy functionality, define technical solutions and implementation strategies, support developers, and collaborate closely with UX and product teams to deliver scalable and user-focused solutions.

Key Contributions:

- Helped build a large-scale TypeScript monorepo from the ground up, consisting of multiple packages and shared libraries, using technologies such as React, Vite, Web Components, Three.js, OpenLayers, TanStack Query, TanStack Table, Vitest, Storybook, ESLint and Amplitude.

- Participated in the migration of a complex legacy application to a modern architecture, analyzing existing functionality and helping redesign solutions with improved maintainability, scalability and developer experience.
- Conducted a deep analysis of the platform's measurement tools, one of its most critical and technically complex features, producing detailed technical documentation, defining implementation strategies and contributing to the delivery of the new solution.
- Led investigations of legacy features, documenting business rules, technical behaviors and implementation details to support the migration process.
- Investigated and proposed the architecture of a framework-agnostic component package based on Web Components, aligned with the company's Design System and intended for use across multiple applications.
- Supported the Team Lead in technical coordination activities, mentoring developers, assisting with problem-solving and helping maintain team continuity during periods of absence.
- Actively participated in feature discovery, brainstorming sessions and UX discussions, helping influence product and interface decisions while balancing business requirements, usability and technical feasibility.
- Contributed to React 16 → React 18 migration initiatives, TypeScript adoption, refactoring efforts, code reviews and ongoing platform evolution.
- Leveraged AI-assisted development tools, including ChatGPT, Claude and LLM-based coding assistants, to support technical investigations, documentation, architecture discussions, code reviews and day-to-day software development activities.

Senior Frontend developer | Feb. 2021 to Feb. 2023 | Paraná Banco

Worked on digital lending solutions for public sector employees, contributing to both new product development and the modernization of existing applications. Collaborated closely with UX designers and frontend teams to improve user experience, evolve the company's design system and deliver scalable React-based solutions.

Key Contributions:

- Contributed to the development of a new lending platform from the ground up, helping define and implement user-facing features and business workflows.
- Developed and maintained financial applications used in the loan origination and loan portability processes.
- Modernized legacy applications by migrating interfaces to the company's design system and improving consistency across products.
- Contributed to the evolution and maintenance of the frontend component library, helping ensure reusability and consistency across multiple applications.
- Collaborated with UX designers to define new features, refine user journeys and translate business requirements into intuitive user interfaces.
- Participated in code reviews, testing activities and frontend best-practice discussions through the company's Frontend Chapter.
- Worked closely with cross-functional teams during planning, refinement and delivery activities within an Agile/Scrum environment.
- Supported deployment and release activities in homologation and production environments.

Frontend developer | Jan. 2019 to Feb. 2021 | Agrotis

Worked on Agrotis' grain storage management platform, contributing to new feature development, legacy system

modernization and frontend architecture improvements. Helped evolve the application by adopting modern React practices, improving maintainability and supporting the company's design system initiatives.

Key Contributions:

- Developed and maintained features for the grain storage module, including the implementation of the services pricing functionality.
- Modernized legacy React applications by migrating class-based components to functional components with Hooks and adopting modern JavaScript (ES6+) practices.
- Contributed to the introduction of TypeScript, helping improve code quality, maintainability and developer experience.
- Collaborated on the adoption and evolution of the company's design system, building reusable UI components and maintaining the shared component library.
- Managed application state using Redux while also simplifying state management approaches when Redux was not required.
- Participated in code reviews and frontend quality initiatives, helping maintain consistency and improve development standards across the application.

Full Stack Developer | Sep. 2014 – Sep. 2015 | PrimeLan Tecnologia

At Primelan I was responsible for creating websites by demand following the web standards and web apps that integrate with WIFI equipment for user authentication. I also created Vitória Online, the official android application for Vitória (ES) city.

Full Stack Developer | Nov. 2012 – Sep. 2014 | Megawork

I helped to build a suppliers pricing application which integrates with SAP. Later I worked building web sites, applications and reports that read data from SAP.

.Net Developer | Feb. 2012 – Nov. 2012 | Phidelis Tecnologia

As a .Net developer, I worked on a web application for managing schools and universities, fixing bugs, creating custom features, doing code reviews and training users to use the platform.

.Net Developer | Jul. 2011 – Feb. 2012 | Superius Consultoria LTDA

At Superius, I was part of a team that was building ERP application using .Net 3.0, C#, DevExpress, Entity Framework and SqlServer.

Junior .Net Developer | Jan. 2010 – Jul. 2011 | Vixtime

At Vixtime I helped to build a News application and News website for the ESHoje, I worked on creating CMS systems and websites by demand following the W3C standards.
